

Learning Activities in Courses

- [Working With Course Elements](#)
- [Additional Course Features](#)
- [Exams](#)
- [Course Problems and Error Messages](#)

In this chapter learning activities within a course will be explained from the participant's point of view. Here you will get information on working with course elements or using additional course features. Additionally, information on the assessment mode can be found here. Frequent sources of errors and error reports will be commented on.

In the section "[Finding courses](#)" in the chapter "Courses & Catalog" you have already gotten information on how to find an OpenOLAT course. Please select from your search results the link in "Title of learning resource" to get to the course view.

Set a bookmark. You will find the corresponding icon either on the bottom right just underneath the "Start / Book course" button on the info page, in the course list to the left of the course title, or in the segmented view on the right side of the course title. You can also find it in the "My course" drop down menu in the course. Bookmarked favourites can be found in the "Course" section in the tab "Favourites".
