

Modules: Repository

In the tab Administration Modules Repository multiple settings can be made.

Beside general settings about the course, the life cycle can be managed automatically.

The screenshot shows the 'Repository settings' page. On the left is a navigation menu with categories like System, Core functions, Login, Modules, and various tools. The main content area is titled 'Repository settings' and includes sections for 'Allow leaving courses', 'Automatic Life-cycle management', and 'Notification after closing / deleting a course'. The 'Automatic Life-cycle management' section has three options: 'Finish' (checked), 'Unpublish' (unchecked), and 'Delete' (checked). Each option has a time and unit selector (e.g., '2 Week' for Finish, '6 Month' for Delete). A 'Save' button is at the bottom of the notification section.

Select which status of the life cycle of the course should be managed automatically. Afterward you can define in which time period the corresponding status should appear. This setting is valid for the whole system and cannot be set manually for one course.

It is also possible to inform all owners of a learning resource by e-mail when it is closed or deleted.

 **Hint**

The settings made here are valid for the whole system.

Additionally as administrator you have the possibility to delete courses definitely. These courses cannot be restored anymore. Therefore open the tab "Deleted" in the authoring. Under settings you chose the action "Delete" and confirm the dialogue.

The screenshot shows the 'Deleted' tab in the Authoring interface. It displays a table with 25 entries of deleted learning resources. The table columns include checkboxes, Type, Title of learning resource, Begin, End, Creator, Access*, AC, Delete by, and Deletion date. A context menu is open over one of the rows, showing options like Copy, Export content, Restore, and Delete. The 'Delete' option is highlighted with a red box.
